

RESEARCH PARTICIPANT Information Sheet

Maze Of Instruction:

Using Video Games to Facilitate Task-Based Instruction of Chinese as a Foreign Language

Christos Mousas

Department of Computer Graphics Technology (CGT)

#2026-00000069

Purdue University

- You are being asked to participate or be a part of a research study. Your participation is **voluntary** which means that you may choose not to participate at any time.
- The researchers hope to learn more about how to use computer applications to teach a small number of Chinese words to people who have little to no experience with the Chinese language. The researchers hope to use their findings from this study in a larger educational game project.
- You are being asked to participate in this study because your fresh perspective will help the researchers understand the strengths and weaknesses of the design of educational language-learning games. This study is designed to test those games—not to test your personal ability.
- You will be asked to:
 - **Take a short pre-test**
 - **Interact with one of two educational games**
 - **Send us your ‘save file’**
 - **Take a short post-test and survey**

You will need a Mac or Windows laptop or desktop computer. Do not attempt to do this study using only a mobile phone. Your computer must be capable of running the application for you to participate. Not all machines will be capable of running the application.

During the survey, you will be randomly assigned to play one of two educational games for learning beginning Chinese. You will need to download, run, and interact with the educational game on your computer for a period of 15 minutes. Afterward, you will need to send us your save file. You do not need to install any software. You can delete the game by deleting the files you download.

You will need to be able to hear the application to participate, as the game will narrate Chinese words and phrases out loud. This means you will need speakers or headphones that are compatible with your computer. You will need a working keyboard. You will need a mouse or laptop trackpad. Instructions for how to play your assigned game will be included in the game.

This is a double-blind study. To avoid biasing you for or against either game, a full description of each game will not be provided in this document.

- The study will take a total of 30 minutes.

Please take time to review the rest of the information. This will give you information about this study to help you decide if you want to participate.

This study is only intended for people who are 18 years of age or older. Do not complete the study if you are not legally considered an adult.

Before agreeing to participate, consider the risks and potential benefits of taking part in this study.

All research carries the risk of breach of confidentiality which means that someone outside of our study could figure out that you were in the study or information was yours. How we will protect your information to reduce this risk is below:

This study will minimize the amount of personal information collected from you to only two items: Your Qualtrics ID, and the fact that you are 18 years of age or older. No other personal information will be collected. We will not ask you for other demographic information. No information about your electronic devices will be collected. After collection and before analysis, your data will be further anonymized through the removal of the Qualtrics ID numbers.

We anticipate that the risks of participating in this research are no greater than what you would encounter in daily life or during the performance of routine psychological examinations or tests. Examples of such risks are as follows:

Learning a new skill can be stressful. Some participants may feel discomfort while taking part in the pre- and post-test. You can skip any of these questions or stop answering at any time. Some participants may experience frustration or other negative emotions while interacting with the application. You may cease participation in the study at any time.

If you choose to take part in this study, any anticipated benefits to you are expected to be small. Those benefits are outlined below:

Research has suggested that learning a new language is good for one's cognitive health. This study will introduce you to a small number of new words in a foreign language. By the end of the study, you may be able to use those words to understand very basic directions given to you in a new language. If you find this interesting, it may help motivate you to try learning a new language.

If you choose to take part in this study, you will help us evaluate the qualities of educational games for language learning. You will also help us and other researchers understand more about the design of educational games.

Will I receive payment or other incentive?

You will not receive payment or other incentives in exchange for your participation in this study. If you choose to participate, we thank you for your time.

How will the researchers protect my information, privacy, and confidentiality?

Any personal information you provide for this study (e.g., Qualtrics ID) may be shared outside the research study if required by law. We also may need to share your research records with other groups for quality assurance or data analysis. These groups include the Purdue University Institutional Review Board or its designees, and state or federal agencies who may need to access the research records (as allowed by law).

Your research information may also be shared with collaborators on this research at Purdue University.

The study team plans to keep the data for this study to answer research questions. We will keep this information until we are done with the study (approximately six months) and for at least three years after we are finished. We may share the anonymous data and findings with other researchers or in research papers or presentations.

What are my rights as a research participant in this study?

You do not have to participate in this research project. If you agree to participate, you may withdraw your participation at any time without penalty, by contacting a member of the research team. Please make sure you know your Qualtrics ID number.

Because data from this study will be anonymized after collection to better protect your privacy, and the Qualtrics ID numbers will eventually be removed, there will be a point in the study where we may no longer be able to distinguish your responses from those of other participants. We will not be able to remove your data at this point.

Participants who provide conflicting or verifiably false answers about themselves, or who do not appear to have filled in the questionnaires in good faith, may have their participation terminated by the researcher without the participant's consent.

The decision to participate or not in the research will have no effect, positive or negative, on the participant's relationship with any of the researchers involved with the study.

Who can I contact if I have questions about the study?

If you have questions, comments or concerns about this research project, you can talk to one of the researchers. Please contact Melissa Kronenberger (kronenbm@purdue.edu) as the first point of contact, or you can contact the principal investigator Christos Mousas (cmousas@purdue.edu).

To report anonymously via Purdue's Hotline, see www.purdue.edu/hotline

If you have questions about your rights while taking part in the study or have concerns about the treatment of research participants, please call the Human Research Protection Program at (765) 494-5942, email (irb@purdue.edu) or write to:
